Can You Define Agriculture?

Here's a simple definition: The science or practice of farming, including cultivating the soil, producing crops, raising livestock and in varying degrees, the preparation and marketing of the resulting products. Georgia's Agriculture and Georgia 4-H have been "Friends" for more than one hundred years. In fact, the first 4-H members in Georgia were kids learning how to increase corn yields on their family farms. Georgia 4-H and Cooperative Extension at the University of Georgia have used the research of the College of Agricultural and Environmental Sciences to improve agricultural production practices of Georgia farmers. As a result of this research-based education, our nation's farmers are producing food and fiber for much of the world.

Georgia 4-H is a partner in public education and strives to incorporate state curricula standards and studies in career awareness in the educational materials produced for in-school use.

Think Green!

Not just 4-H Green...but let's help do our part to recycle and reuse. Save this book, reread it or pass it along to a friend. If it's too worn, please recycle it. Agriculture is the United States largest industry, but consider this interesting fact: Less than two out of every 100 people in the US are involved in farming. Knowing this, join me, Arch the Dawg, as we explore the many careers that are involved from Farm to Fork!

ERMELON!

OF BULL

THE TAPESTRY OF GEORGIA'S FARMLAND

Georgia's farmland is like a patchwork quilt across our state.

Have you ever seen a quilt? A quilt has many individual squares that have their own design and pattern. When sewn together, the squares form a large and colorful covering. Many people think of quilts as a treasure because of the time and effort invested in constructing them. Quilts are often handed down as family heirlooms, and we can think of Georgia's farmland much the same way. Many family farms have been handed down from generation to generation, giving us a rich history of farming in our state. In fact, 87% of Georgia's farms are family owned!

Georgia has many different types of farms, and the differences we find in growing seasons, soil, and climate make our ability to produce agricultural products very diverse. Let's take a

look at the tapestry of Georgia's Agricultural Farmland and see some commodities from Georgia farms.

The impact of Agriculture on Georgia's economy is \$73.3 Billion a year!

Broilers (chickens) are Georgia's top commodity

decades.

Georgia laying flocks produce 4.29 billion eggs!

CORN

GREEN INDUSTRY DAIRY/BEEF

PECANS

The average cow in Georgia produces about 2,188 gallons of milk per year!

VIDALIA ONIONS

Blueberries contributed a value of \$283.9 million to the total agricultural impact on the economy.

PEANUTS

Peanuts are the official state crop. Georgia's 1.65 billion pound yield accounts for almost half the nation's peanuts!

CULTIVATING 4-H KNOWLEDGE

Georgia 4-H has a core program called 4-H Project Achievement. In 4-H Project Achievement you explore a topic of interest, develop a speech and poster and present your information in a public forum. We have many projects that connect to Agriculture. Take a look at 4-H Project Achievement here: georgia4h.org/projectachievement

s we have already discovered, the economic impact of Agriculture in Georgia's is \$73.3 billion each year. Because our state is so large, Agriculture looks different in each of the 5 growing regions in Georgia. Georgia farmers (we can also call them producers) grow all types of crops, including cotton, peanuts, watermelon, blueberries, pecans, apples, peaches, Vidalia onions, peppers and much more! They also raise beef cattle, bees, dairy cattle, horses, poultry, sheep, goats, and swine. Some farmers even grow fields of trees, and we call this commodity timber.

Georgia Grown is a program from the Georgia Department of Agriculture that helps producers, processors, suppliers and consumers as they grow, process and sell agricultural products that

are grown in Georgia. You can find out more information at georgiagrown.com

Arch the Dawg is ready to map agriculture in our state... let's journey together to discover what grows where!

Key Terms

- A commodity is another word we can use to describe agricultural products like cotton, peanuts and poultry.
- Poultry producers raise birds, like chickens and turkeys, for their eggs or meat. Broilers are chickens raised for meat and they are Georgia's number one agricultural product.
- Some farmers in Georgia produce timber, which are trees grown to produce wood for building, carpentry and paper products.

Did You Know?

- Georgia supplies nearly one-half of the nation's peanuts.
- Poultry, beef and dairy cattle, and horses can be found in all five physiographic regions of Georgia
- Cordele, GA is known as the Watermelon Capital of the World because of the quality and quantity of their watermelons. Who doesn't love to eat a tasty watermelon on a hot summer day?
- Georgia's top 5 Vegetable Commodities are:
 - 1. Onions
 - 2. Sweet Corn
 - 3. Watermelon
 - 4. Bell Peppers
 - 5. Cucumbers

The Georgia Food Bank
Association launched its
"Farm to Food Bank" program
to source donations of fresh
fruits and vegetables from Georgia
farmers, growers and packers for

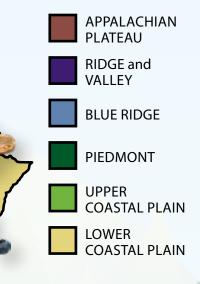

distribution by Georgia's seven regional food banks. We source donations of wholesome, but unmarketable fruits and vegetables due to size, blemishes or some aesthetic imperfection. Adding Georgia grown fruits and vegetables to the tables of the 1 in 5 Georgians who need food assistance

CULTIVATING 4-H KNOWLEDGE

Georgia 4-H has many opportunities for you to participate in that have a direct tie to Agriculture. Here ar Horse Quiz Bowl, Forestry Judging, Livestock Judging, Poultry Judging, Land Judging, Hippology Contest call these 4-H'ers Youth Exhibitors. To learn more about judging events go to georgia4h.org

The State of Georgia extends from the Atlantic Ocean into the Blue Ridge Mountains. The State is divided into five regions based upon physical geography. These regions are called Physiographic Provinces. The five physiographic provinces of Georgia are the Coastal Plain, the Piedmont Region, the Blue Ridge Region, the Ridge and Valley Region, and the Appalachian Plateau. Vegetation varies among these provinces and within them. You can find out more about these regions on the New Georgia Encyclopedia website: georgiaencyclopedia.org

GEORGIA PHYSIOGRAPHIC MAP

Let's learn more about where Georgia's Agriculture can be found among the regions

The Appalachian Plateau is the smallest region and is found in Georgia's northwest corner. Farmers in this region produce beef and poultry and small grains (like wheat). Wheat is harvested for grain and then baled for straw.

Farmers in the **Ridge & Valley** Region produce commodities like corn and soybeans and also grow and produce food for dairy cattle, beef cattle, and horses. We call this food hay and **forage** (bulky food such as grass). **Silage**, (grass that is compacted and stored in silos), is another commodity grown to support dairies in the region.

In the **Blue Ridge** region of Georgia you'll find apples, peaches and grapes. You will also find vegetables to support the many local farmers markets (multi-stall market at which farmers or producers sell agricultural products directly to the general public) throughout the region.

The **Piedmont** Region is one of the largest regions in Georgia and is in the northern part of the state. Agriculture in this region includes many commodities like beef, poultry, eggs, ornamental horticulture and dairy.

The **Upper Coastal Plain** and **Lower Coastal Plain** are home to the state's vegetable and fruit producing regions. Farmers in the Coastal Plain produce a wide variety of crops like cotton, peanuts, timber, watermelons, blueberries, peaches, peppers, pecans, soybeans, and Vidalia onions.

Test your Agricultural and Geographic knowledge!

Can you define the word Commodity in your own words?

increases the nutritional value of their meals. We know that hunger and obesity are two sides of the same coin, because people who don't know where their next meal comes from don't always have access to a balanced diet when

food is available. Adding fresh fruits and vegetables is an important goal of Georgia's seven regional foodbanks.

List a few commodities that you have learned about that grow in your physiographic region:

Share one interesting fact about Georgia's Agriculture that you have learned:

e some to consider: Cotton Boll & Consumer Judging, Dairy Judging, Dairy Quiz Bowl, Horse Judging, at (this is not a contest about Hipposl) and Wildlife Judging. We also have youth who show livestock, we

It takes many **STEM** (science, technology, engineering, and math) careers to get food from the farm to your family. In fact, one in every seven Georgians works in agriculture, forestry, or a related field. Take a closer look at what it takes to have a career in agriculture by selecting an agricultural-related career, conducting your own research, and completing the "Wanted Poster" below.

 Specialist

SPCTLIGHT ON CAREERS

A **Career** is defined as an occupation undertaken for a significant period of a person's life with opportunities for progress. Your teachers and parents are charged with the task of helping you to begin to think about career choices based on your strengths and interest. As educators we are

charged with helping you to be College and Career ready so that you have the skills and knowledge necessary to qualify for schooling or job training after high school. An ideal way to explore career choices is to get to know what types of careers exist. Let's take a look at some careers that you can find from the Farm to the Fork... it begins with a farmer, but there are lots of people who contribute to the agricultural industry in our state.

Child Nutrition Programs Director

Michele Chivore Michele Chivore serves as the Atlanta Community Food Bank's Director of Child Nutrition Programs where her role is to develop the strategy around and implementation of the Atlanta Community Food Bank's programs aimed at reducing child hunger. This includes outreach programs to increase capacity and participation in federally funded child nutrition programs while

strategically exploring new opportunities to reduce the prevalence of childhood hunger across the Food Bank's service area. Prior to joining the Atlanta Community Food Bank, she served as Campaign Director for Childhood Hunger Programs at the Georgia Food Bank Association (GFBA) where she worked in conjunction with GFBA member food banks, local nonprofit and national partners to implement a state childhood hunger advocacy, communications, and marketing plan. She gives her time and talent to serve on the Georgia 4-H Advisory Committee.

Citrus Grower – Lindy Savelle, a retired federal law enforcement agent has a new career as a citrus grower. She and her husband Perry, returned to Georgia with a goal of finding a way to give back to their communities through the development of an alternative niche, yet sustainable agricultural commodities. Lindy and Perry planted a commercial citrus grove in Thomas County and a test plot in Mitchell

County. They now sell fresh farm, Georgia Grown citrus. In addition, Lindy and Perry started Georgia Grown Citrus LLC, (GGC), a commercial tree nursery hub partnering with four other commercial nurseries which propagate citrus trees for sale to commercial growers and homeowners. Among the available varieties GGC sells are the University of Georgia's patented seedless, cold hardy tangerine, grapefruit and lemon varieties. Lindy has served as the President of the Georgia Citrus Association since its inception in October of 2016. That is her give-back, not only to her community, but to our state.

Registered Dietitian Nutritionist (RDN) – Alison (Ali) Berg is an Assistant Professor and serves as the Extension (an outreach unit of UGA) Nutrition and Health Specialist. She coordinates programs at the University that teach people about the prevention and control of chronic diseases (long lasting condition that can be controlled but not cured) and does research on the effectiveness of these

programs (how well they work). Since 2007, Dr. Berg has worked as an RDN in various settings such as public health clinics helping women feed their babies, in schools creating menus and ensuring students get healthy meals, and at the University in research studying how different diets help older people be stronger and healthier. Dietetics is a rewarding career with opportunities to do many different things in many places.

Engineer – Michael Reeves is the owner of the civil engineering (engineering discipline that deals with the design, construction and maintenance of the natural environment) firm Reeves Design Services, LLC. His firm specializes in helping private and government clients with civil engineering projects such as wastewater treatment systems, sizing storm sewer systems, water distribution

systems, roadway designs and site layouts for residential, commercial and industrial developments. Growing up on a farm provided him experience in problem solving and having to think of alternate methods to repair or resolve an issue. He is a graduate of the University of Georgia and studied Agricultural Engineering while a student at UGA. He also volunteers his time to serve Georgia 4-H by advising Georgia 4-H's State 4-H Board of Directors.

2019 Georgia Farmer of the Year

Peach Farmer – Robert Dickey was named the 2019 Georgia Farmer of the year. Since 1897, his family's farm, Dickey Farms, has been producing high quality peaches. Thirty different varieties of peaches are grown on Dickey Farms from early May through late August. Over the last five to ten years, Dickey Farms has expanded into the agro-tourism business, applying great ideas from all members of the family. They use the space of a generations-old wooden packinghouse and a general store where ripe peaches and peach ice cream can be savored by tourists, local school groups, and general passersby.

On top of all this dizzying activity, Robert L. Dickey III is a Georgia state legislator, having been elected and returned to the state's House of Representatives for District 140 four times. Robert L. Dickey III's ambition is to carry on the farm's legacy and take care of the land for the generations to follow.

Diagram Your School Day Diet — Do you know where the food you ate today came from?

Write down what you ate and drank today. Now circle the foods you can identify that came from a farm.

Morning Snack	Lunch	Afternoon Snack
Example: Grapes, Cheese and Crackers	Example: Barbecue Pork Sandwich, Celery and Carrot Cup, Pears, Strawberries	Example: Graham Crackers, Sliced Apples

Health is part of the 4-H pledge and has been an important focus of 4-H for more than 100 years. As you charted your food today and traced it to the farm where it was grown, we want to remind you that healthy habits are important at every age. Everyone needs a food plan based on the My Plate Guidelines. To learn more about healthy food choices, visit choosemyplate.gov/kids

Being Active is also an important part of a healthy lifestyle. Talk to your classmates about registering for Walk Georgia as a group or register your family to participate in Walk Georgia. Visit walkgeorgia.org to learn more.

Take a look at your school's breakfast and lunch menu. The School Breakfast Program and the National School Lunch program can help you to understand how farmers, growers, food processors, distributers, school nutrition directors and the United States Department of Agriculture work collaboratively to supply food to schools.

Do you know how 4-H is connected to School Nutrition? We are both part of the United States Department of Agriculture; we just connect with you through different avenues.

Take time to thank a farmer, a producer, a cafeteria manager or school food service worker for the delicious meal you had today. If you brought your lunch from home, ask your parents where they got the food. Pay close attention to the fruits and vegetables you ate since many grocery stores are marketing locally grown produce in support of our Georgia farmers.

To learn more about the Farm to School Food movement go to: fns.usda.gov/farmtoschool/farm-school

Parents! Thank you for taking time to review this publication with your child. Please help your 4-H leader know that you have learned more about Georgia 4-H with your child.
