

## Astronomy Journal Questions

1. What is a constellation?
2. Name and draw one constellation you saw or talked about.
3. Draw the positions of the sun, moon and earth when it is a full moon. Shade the part of the moon that is not illuminated by the sun.
4. Name one planet you visited during your planet walk and list two facts about that planet.

5. Connect the following group of stars to create your own constellation. (You can use most or all of the stars.) Explain your constellation.

6. What is a comet?

7. If one of the twelve zodiac constellations is directly overhead in the sky, what does this tell you?

8. What four planets are considered terrestrial planets because they have solid rocky surfaces?
