

# BEE'S, BEE'S, BEE'S!!

According to all known laws of aviation, there is no way a bee should be able to fly. Its wings are too small to get its fat little body off the ground. The bee, of course, flies anyway because bees don't care what humans think is impossible. -The Bee Movie, 2007

## Do your part!

Our bees need your help! Every year, we see a decline in bee population. Do your part by planting pollinator-attracting flowers in your yard and participating in the annual Great Georgia Pollinator Census!

## Did you know?

- Honey Bee's are the only insects that produce food eaten by man
- Not only are bees important for making honey, they pollinate our plants to help grow plants, fruits, and vegetables!
- Honey bees pollinate \$15 BILLION worth of crops each year!

**SAVE THE BEES!**
