# Newts

Fun Fact: Like frogs and toads, Newts start life as eggs, hatch into tadpoles, and undergo metamorphosis to become an adult newt. The most common newt here at Wahsega is the Red-Spotted Newt; look closely in our pond to find them!

# Dragonflies

Fun Fact: Dragonflies are successful predators both in their larval stage (where they are called nymphs or naiads) and in their adult form. They are very agile fliers and catch their prey on the wing.

You're a dragon, not a dragonfly!  
Don't look at me like that.... Oh, fine.

# White-Tailed Deer

Fun Fact: White-Tailed Deer are ruminants- they have a four-chambered stomach, like cattle. This unique stomach allows them to eat a variety of plant material, from grasses and leaves to fruits and nuts. They will even eat poison ivy!
