## Answer Key

### Part I: Short Answer

1. Would a dog or a cat be considered wildlife? Why or why not?  
*A dog or a cat would not be considered wildlife because they are domesticated animals.*
  
2. What are three adaptations that help turtles like Terry survive in the wild?  
*A protective shell, a beak to tear up food, and claws to dig for food and walk across land. Omnivory can also be considered a behavioral adaptation.*
  
3. What are the four types of teeth that can be found in an animal skull? Name the function of each tooth type as well.  
*Incisors (biting and tearing plants), canines (tearing and shearing meat), premolars and molars (both used to grind plant matter).*
  
4. What left the track David found in the beginning of the video? Was it a giant rabbit?  
*David did not find a giant rabbit track at the start of the video; it appears instead to be a deer track.*
